

NEW! Supplied as standard with the WeiTronic Agido-868 product protection sensor

*The graceful awning
— jam-packed with technology*

You will be convinced by the weinor cassette awning Cassita with its *modern design and sophisticated technology*

*weinor Cassita –
great things come in small packages!*

Size doesn't always matter. It is often the smaller things
in life that provide the greatest surprises.

The **Cassita** is the fully equipped cassette awning for small and medium-sized patios. With its extremely flat and elegantly designed cassette, the most advanced and sophisticated weinor awning technology is housed in a very small space.

Just the right angle

The awning can be tilted infinitely manually to any angle between 5 and 45 degrees to allow for how high up it is fitted and the angle of the sun.

When sophisticated technology is combined ...

... with an elegant design, we call it the Cassita.

As safe as houses!

The cassette awning **Cassita** provides optimum protection from the wind and weather: When retracted, the fabric and awning arms disappear completely. The front rail closes optimally, making it inconspicuous, to give you life-long pleasure from the new space you have created!

Comfort with the remote control

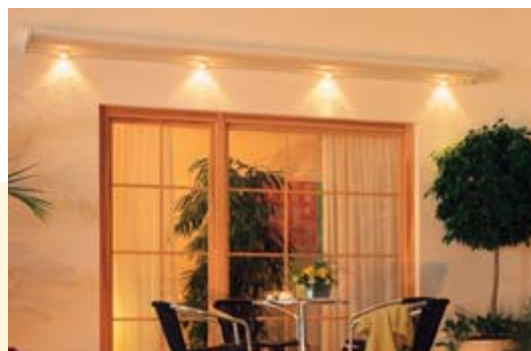

Product protection sensor for added safety

The **WeiTronic Agido-868** is inconspicuously housed inside the drop profile as standard and reacts to blustery conditions or other vibrations, retracting the awning (only works in conjunction with WeiTronic).

You can operate the **WeiTronic Remoto** remote control to adjust shade, heating and light from your favourite chair. You can even adjust the light and heating.

*It's all in your hands:
clever accessories for your comfort*

Cassita Lux – the lighting is included

The **Cassita** is also available in the **Cassita Lux** version with a factory-fitted light bar. The lamps come in the same colour as the awning housing and can be tilted, fitting harmoniously into the overall design. The low voltage bulbs produce a pleasant light, creating an atmospheric ambience.

The patio heating makes the season longer

The heating system **Tempura** makes the patio a very pleasant place to be, even in cooler weather. The radiated heat covers a relatively large area. The housing can be adjusted upwards and downwards as required.

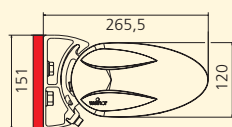

CLICKFIT With an exceptionally long service life of 5,000 hours, you will find these quality Philips heating tubes very convincing. Replacing the tubes is quick and simple with the Philips Click-fit-System.

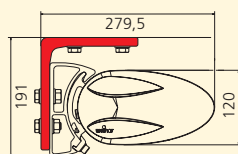

Reacting to all weathers: WeiTronic weather sensors

The **WeiTronic** weather sensors are available as just a sun sensor, a sun and wind sensor, or a sun, wind and rain sensor. Depending on the version, they automatically open the awning in the sun and retract it in the wind and rain. That way, they provide protection and safety, even when you are not at home.

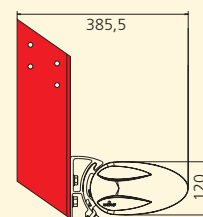

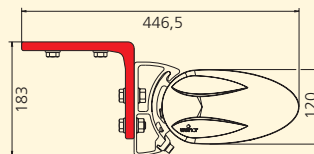

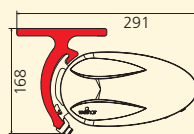

Perfect and simple fitting, even in a wide range of different locations with modern two-point mounting.

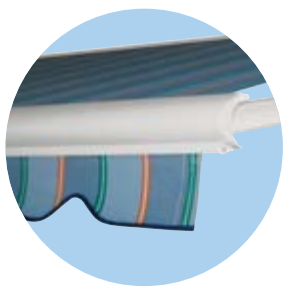

Wall mounting

Ceiling mounting

Rafter mounting

Lots of sophisticated details

Optionally the cassita is available with 15 cm height volant.

For example, rainwater is led away to the side through the integrated gutter.

We offer the very highest quality

weinor puts a lot of emphasis on quality, from the design and materials to workmanship, mounting and service, so you can enjoy your **Cassita** for a long time.

Proven top quality

Awning technology for the highest demands

Made in Germany – certified top weinor quality

Quality is our first commandment. That's why all our products are designed with durability and safety in mind, as numerous certificates from Germany's inspection authorities (TÜV) show. weinor invests a lot in the development of new products. The result: innovative products made in Germany.

Taking a hammering

While cast parts can shatter, weinor's forged materials can even withstand hammering.

Longevity

We don't cut corners on the big or small parts: All our small parts such as screws, nuts and bolts are of stainless steel so they will last especially long. All other parts are powder coated in an elaborate process. This makes them impact and scratch resistant.

Non-wearing

Even after being opened and closed many thousands of times, the round steel linking chain in the centre joint of the awning shows no signs of wear. We guarantee it for **10 years**.

The best advice from your experts

The best way to get an idea of how your patio will look with the **Cassita** is to get advice from an expert. Our competent dealers will be happy to advise you, giving you sound advice and assistance on all technical and aesthetic matters.

No matter what you want to use your patio for, weinor has the right product for you – awning, patio roof, Glasoase® and conservatory

As an experienced specialist, your weinor dealer will help you throughout the process, from planning to completion. They will help make your patio dreams come true and will support you with advice and help. That way you stay on the safe side at all times.

Important Informations:

For textile sun protection: Creases can form in the fabric and when folding the awning cloth. That can lead to the areas of the fold appearing darker when seen against the light, particularly with light colours. Folds in the fabric in the areas of the seam, border and panels can be caused by multiple layers of fabric and different diameters of rolled up fabric. The stresses in the fabric caused by this can lead to rippling (e.g. waffle or fish-bone shapes). This is normal to differing degrees with nearly all awning fabrics. Creases and folds in the fabric do not reduce the awning's value or its suitability for its purpose. Awnings and conservatory blinds are for protection from the sun and should be rolled up in rain

and strong winds. Wet fabric creases more easily and as far as possible should only be retracted after drying out (please take care in strong winds and avoid the formation of puddles). Depending on the colour of the ordered frame we supply all small parts as well as crank handles and drives for units with crank mechanisms in black (similar to RAL 9005), white (similar to RAL 9016) or grey (similar to weinor 7319). **For patio roof, Glasoase®, conservatory:** contact a qualified conservatory builder for information on the causes of condensation and occasional cracking noises, and on how to avoid these from the outset during the planning stage.
