

markilux 1600 stretch

The perfect solution for narrow patios, niches and balconies

**rated to wind resistance class 2
(corresponds to Beaufort 5)**

www.markilux.com

markilux

Design Features

presented with the IF Design Award for excellent design

folding-arm awning in a semi-cassette version; the dynamically rounded coverboard gives the awning the appearance of being fully cassetted; The dynamically rounded coverboard gives the awning the appearance of being fully cassetted

elegant and robust front profile made of aluminium with valance slot

Technical Specification

thanks to this innovative technical solution – tiered arms – large projections can still be achieved in narrow awnings

sturdy, round steel torque bar, 50 mm Ø, to prevent twist and deflection

coverboard with integrated brush, so that larger pieces of dirt and debris cannot be drawn into the awning

the 85 mm roller tube ensures the highest stiffness and the best possible cover winding characteristics even at the largest widths

folding arms with perfected power transference by means of twin, steel-link chains and direct coupling of the springs; maximum safety even in the case of large projections

Optional Accessories

the shadeplus creates an additional room on the patio; protection from the sun, the wind and inquisitive glances all in one

radio-controlled motor with radio remote control for ease of use

hard-wired motor operation (optionally with automatic weather controls) for straightforward and easy operation

in the case of manual operation ease of use is ensured with the spring-assisted gearbox

wall sealing profile to cover the gap between awning and wall

awning available in non-standard RAL colours

Other end cap colour options

	standard	optional
polished chrome		

Dimensions and tolerances

	width	projection
housing tolerances	+5 / -15 mm	±40 mm
awning cover width = awning width	-260 mm	
awning cover length = awning projection		+180 mm

Additional information

The width of the awning cover is always **less** than that of the awning.

Pitch adjustment range:

from 5° to 25° (to the horizontal).

Definition of projection:

Please consult the section "Technical Information".

In the case of manual operation approximately **16 winding handle revolutions can be assumed per metre of awning projection.**

It takes approximately **12 seconds per metre** to extend the awning in the case of **motor-driven units.**

Definition of shadeplus drop: The shadeplus drop is measured from the bottom edge of the shadeplus profile to the bottom edge of the valance profile. Due to fabric thickness tolerances the actual drop may be shorter than the nominal drop by up to 5 cm. For the maximum shadeplus drops please consult the section "Technical Information".

A shadeplus is not available with sunsilk perla FR, sunvas perla or PVC covers.

This model is only available as a single unit.

Colours similar to those in the RAL chart. Colours may differ slightly from those depicted in both hue and finish.

HT BHT	2 90 mm
----------	-----------

BM	8
----	---

BM	8
----	---

The pull-out force refers to the horizontal centre to centre measurement between the fixture points of **80 mm**.

- M = awning width
H = projection
FB = pull-out force per fixing point
HT | BHT = bracket quantity | width
BM = no. of fixing points

dimensions in mm

Eaves fixture

Torque [Nm = Newton metres] for the fixture bracket in the immediate vicinity of the arm, shear force [N = Newton] per fixing point according to EN 13561, wind resistance class 2

Torque									Shear force							
M [cm]									M [cm]							

The shear force is calculated on the basis of 2 fixing points per bracket, because – depending on the roof pitch – it cannot be guaranteed that 4 fixing points per bracket can be used.

M = awning width

H = projection

Md = torque value for the bracket in the immediate vicinity of the arm

HT = no. of brackets

FS = shear force

BM = no. of fixing points

dimensions in mm

Eaves fixture with additional spreader / backing plate

Torque [Nm = Newton metres] for the fixture bracket in the immediate vicinity of the arm, shear force [N = Newton] per fixing point according to EN 13561, wind resistance class 2

Torque									Shear force								
M [cm]									M [cm]								

By using the additional flat fixture plate, the shear force is reduced in comparison with conventional eaves fixture.

M = awning width

H = projection

Md = torque value for the bracket in the immediate vicinity of the arm

HT = no. of brackets

FS = shear force

BM = no. of fixing points

dimensions in mm

Installation using the adjustable eaves fixture bracket

Pull-out force [N=Newton] per upper fixing point according to EN 13561, wind resistance class 2

dimensions in mm

Face fixture with manual operation

dimensions in mm

Cable exit position in motor-driven units

dimensions in mm

Bracket fixture range for awnings with 2 folding arms

dimensions in cm

If the brackets cannot be positioned in accordance with this table, make sure the actual measurements are noted on the order form!

- M = awning width
- MH = bracket centre
- AS = operation side (opposite the tiered folding arm)
