

markilux 930 swing

The designer awning with unique pivoting mechanism

**rated to wind resistance class 2
(corresponds to Beaufort 5)**

reddot design award
honourable mention 2009

www.markilux.com

markilux

side view
with awning retracted,
face fixture

folding arm
with round,
steel-link chain

top fixture
during extension
at a pitch of 45°

pitch adjustment
possible from 5° to 80°

the awning is always
horizontal – as shown
– when retracted

top fixture
during extension
at a pitch of 80°

markilux 930
with system coverboard
(optional)

Design Features

elegant and chic; designed down to the last detail

inconspicuous appearance; suited to any building façade

when the awning is closed the side cheek and front profile become one

in the case of manual operation it is supplied with a markilux stainless steel winding handle

quality to get to grips with

a straight or wavy valance adds to the awning's appearance

Technical Specification

ideal combination of low construction height and stiff 85 mm roller tube gives optimum winding characteristics

continuously variable pitch adjustment up to 80°

with ingenious, new pivoting mechanism, under patent

the small construction height and the steep pitch provide ideal protection from the sun even when it is low in the sky

folding arms with perfected power transference by means of a round, steel-link chain at the elbow joints

awning covers made of sunsilk snc or sunvas snc with self-cleaning effect

Optional Accessories

external receiver with hand-held remote control for easy operation

hard-wired motor operation (optionally with automatic weather controls) for straightforward and easy operation

in the case of manual operation, ease of use is ensured with the spring-assisted gearbox

awning available in non-standard RAL colours

Frame colours

		standard	optional
traffic white	RAL 9016		
metallic aluminium	RAL 9006		
grey brown, similar to	RAL 8019		
light ivory	RAL 1015

Dimensions and tolerances

	width		projection
			
housing tolerances	+5 / –10 mm		±40 mm
awning cover width = awning width	– 270 mm	– 300 mm	
awning cover length = awning projection			+260 mm

Additional information

The width of the awning cover is always **less** than that of the awning.

Awning pitch range: in the case of gearbox from the front 5° to 25°, gearbox from the rear 5° to 55° and in the case of motor operation 5° to 80° (all measured to the horizontal).

Definition of projection: Please consult the section “Technical Information”.

In the case of manual operation approximately **16 winding handle revolutions can be assumed per metre of awning projection.**

It takes approximately **12 seconds per metre** to extend the awning in the case of **motor-driven units.**

This model is only available as a single unit.

M = awning width

M min. = minimum widths

H = projection

HT BHT	2 150 mm
----------	------------

2 150 mm

BM	6
----	---

6

The pull-out force refers to the vertical centre to centre measurement between the fixture points of **90 mm**. If this measurement is reduced to the minimum, the pull-out force increases by **14%** in the case of **compression-proof substrates** and by **19%** in the case of **non compression-proof substrates**.

- M = awning width
- H = projection
- FB = pull-out force per fixing point
- HT | BHT = bracket quantity | width
- BM = no. of fixing points

dimensions in mm
