Samson Glass Verandas

The Terrazza is a glass veranda system of the highest quality incorporating the very best German manufacturing processes to produce a purpose made aluminium and glass outdoor roof. The whole system is bespoke to suit individual requirements in size, shape, style and colour.

A glass veranda only usually requires a back wall plate to an existing structure with minimal support required for the front posts meaning installation is fast and has minimal disruption.

Create an all weather outdoor covered area to ensure your outdoor plans are never ruined by the rain again.

The Terrazza has 2 distinctive roof bar profile design options depending on the projection. The roof is snow load tested to very high standard levels ensuring it is suitable for any UK weather and all rainfall is neatly directed down to the front profile which has a guttering channel discreetly built in. The rainwater is collected and directed down one or more of the support posts to either be directed out at low level or sent into a soakaway or existing system.

The entire aluminium framework is offered in 56 standard colours, traditional and modern with special colours available if required. The roof glass is usually clear but can also be tinted to reduce sun glare for south facing verandas. The glass is normally 10-12mm safety glass.

Relax and Entertain your friends and family in the Terrazza Glass Veranda. The perfect way to gain a lot of extra outdoor covered space.

All these additional elements help you to create that perfect outdoor area to enjoy the hottest summer days and nights as well as the cooler spring and autumn evenings. You will most likely find the glass veranda is the most used area around your home

if specified correctly, providing the perfect relaxation or entertaining space for you and your friends. We all love being outdoors as much as possible and taking control of the great British weather makes this possible.

Whatever your requirement for sun, wind or rain protection outdoors Samson are sure to have a solution even though it may not be apparent initially.

Samson Glass Rooms

Samson Glass Rooms

Spend hours of enjoyment in your garden glass room and let a place filled with light and transparency work its magic on you.

See more about our glass rooms
on our specialist brochure website

www.ukglassrooms.co.uk

Imagine a special room that embraces all the seasons of the year and yet enables you to be protected from the wind, sun and rain by the use of various elements built into the room.

An outdoor room for relaxing or enjoying company which can be opened up to embrace the warmth and sunshine or closed up to protect from wind and rain – far more use throughout the year than any normal ‘conservatory’ can offer. Watch the rain falling above your head, feel the warmth of the sunshine but control the breeze, see the outdoors with almost no obstruction, your cherished garden and outdoor area.

Welcome to the Samson glass room project – design and build your own glass room – any size, shape and finished colour. Professionally specified, designed and manufactured in Germany and effortlessly installed to your home enhancing your home in all ways and providing a very special place for many years to come.

Samson are unique in that we offer several glass room systems, all manufactured by

long established German manufacturers. (These kind of glass rooms, or ‘winter gardens’ as they are known, are already very popular in Northern Europe where the weather systems are similar to our own). Visually and technically there are differences which will appeal to your different requirements and tastes. Colours, blind options, roof designs and door systems can all be specified for your perfect end result. Take total control of the UK weather in your own garden and give yourself a space where you will spend many hours enjoying many aspects of this new ability to take your indoors to the outside nearly all year round.

Whether your home is modern or very traditional the glass room is suitable. Minimal construction work is usually required to enable the installation and from order to installation is normally around 5-6 weeks maximum.

G6 Glass Veranda

The G6 veranda is a simple yet stylish glass veranda made to measure and uses lighter roof glass than our other models. It has a more limited projection of around 3.2 metres but can be manufactured to any width at all.

Just like the other lean to systems the post supports require minimal concrete pads and the higher back section is a simple wall plate fitting directly to the building or structure for support.

The rainwater guttering is an integral part of the front profile for a neat and clean finish. The support legs act as the drain pipes taking the water from the front

profile and out at low level in most cases, other options are possible using a soakaway or existing drainage systems.

The standard system is in white but almost any colour can be specified for a small extra charge. The design and installation of glazed or solid side infills for extra weather protection is also available with many options.

A 'Victorian' upgrade is possible giving decorative cast aluminium sections at the top of the support posts as well as additional decorative detail to the vertical posts itself.

Overview

1. Toughened 6mm Glass Roof
2. White Finish as Standard - Any RAL Colour Option
3. Integrated Rainwater Guttering
4. Victorian Upgrade on Design, Side Glazing Options

P16 Veranda and Homestyle

The P16 is a polycarbonate veranda system using the same styling as our G6 system with the option of the Victorian upgrades when required. It has integrated rainwater guttering in the front profile and can be manufactured to any width required.

The Homestyle is a basic polycarbonate roof system offering use as a canopy for the garden or a car port system. The rainwater guttering is externally mounted in white or brown Upvc with external downpipes for one or more of the support legs.

Overview

1. Same framework as the G6 Glass Veranda
2. Made to Measure Sizes
3. Optional RAL or BS colours
4. Choice of clear, opaque or bronze tint roof panels

P25 / P35 Polycarbonate Roof

Stanza

The P25 and P35 polycarbonate roof systems from Samson offer excellent value for money and can cover enormous areas for domestic or commercial purposes.

All the roof canopies are made to measure and available in white from stock but also with the option of powder coating to almost any colour required.

The entire framework is manufactured from aluminium and there are options on the profile design for the front support posts. You can either have a standard post design or an upgrade to the 'Victorian' design featuring ornate castings to give a far

more period style to the overall look of the veranda.

The polycarbonate roof itself is offered in 3 different options of depth – 16mm, 25mm and 35mm. All the options can be supplied in either a clear or opal finish, offering up to 99% UV protection.

Both the P25 and P35 polycarbonate roof panels have a fire performance rating to BS476 part 7 class1, EN13501 and B-s1, d0.

The roof is also strong enough to walk on and used as a means of escape and maintenance with the use of boards.

The Stanza is a lighter version of our very popular Piazza systems, an aluminium roof system we have sold for many years now with either a polycarbonate or glass roof infill. The Stanza was designed to literally let more light in with less roof support bars than the Piazza.

The Stanza is the same structural design with integrated rainwater guttering in the front profile and drainage through the support legs. The roof is available in 3 types of triple wall polycarbonate with either a clear, opaque or bronze tinted finish. The roof design is very sleek and minimal in its presentation.

The aluminium framework is available as standard in either a cream (RAL9001), Sepia brown or anthracite grey (RAL7016) finish.

The Stanza has various elements that can be added at the point of installation or later to further enclose the sides and front including solid glass sections, vertical fabric blinds and sliding doors.

The sleek and unique design of the Stanza makes it quite different visually from other roof systems we provide and is ideal for smaller or medium sized patio or terrace areas.

Overview

1. Full 10 year Guarantee
2. All Aluminium Structure
3. Stainless Steel Fixings
4. High UV Protection
5. Any RAL Colour Option
6. Projections up to 6m
7. Unlimited Lengths

Overview

1. Purpose Made Sizes
2. All Aluminium Structure
3. Front and Side Infill Elements
4. Smooth, Clean Design
5. Integrated Guttering and Drainage
6. 4m Max. Projection

The perfect way to enjoy the outdoors

Retractable Canopy, Awning & Pergola Systems

The perfect way to enjoy the outdoors, whatever the weather. Samson offer various retractable canopy and awning systems, providing fully adjustable sun shade, wind and rain shelter over smaller or very large areas. Constructed from durable materials with minimal maintenance these are an effective way to create extra space in your outdoor area without the fuss and hassle of an extension and all the associated building work.

The majority of systems are constructed from aluminium, with some options on timber designs for the wall supported pergola models. All the systems have motorised roof mechanisms controlled by various methods and also with safety systems for more exposed sites.

Wall supported or free standing, these systems are perfectly suited for large areas.

Enjoy the outdoors

Many options can be used to close off some or all the sides to provide full weather protection. These include vertical blinds, sliding glass doors and solid infills.

LED lighting, heating, sound systems and other elements can make the installation an 'outdoor room' for all year round use.

Overview

1. All Weather Solutions
2. Free Standing or Wall Supported
3. Tough Fabric Roof Systems
4. Aluminium Louvred Roof Systems
5. Integrated Guttering
6. UV Protection
7. Electric Operated as Standard
8. Tough Colour Finish Options
