

markilux 5010

The cassette awning – slim, strong and simply stylish

**rated to wind resistance class 2
(corresponds to Beaufort 5)**

side view
with awning retracted,
face fixture
(top fixture is optional)

side view
with awning retracted
showing gearbox
eye for manual
operation (standard)

shadeplus /
drop valance
(optional)
retracted

markilux 5010
with wall sealing
profile (optional)

during extension

shadeplus /
drop valance
(optional)
during extension

corrosion-resistant
and technically proven;
twin steel-link chains

pitch adjustment via
the fixture brackets

optional, subject
to a surcharge –
markilux bionic tendon
made of high-tech
fibres for ideal power
transference

Design Features

the slim cassette awning with the elegant contours – from the design studio

the cover profile is in the same colour as the cassette; this provides for a closed appearance even when the awning is extended

attractively shaped, rounded end caps complete the appearance of this slender cassette awning

attractive brackets; design down to the last detail

Technical Specification

in spite of its slender shape the superior design of the markilux 5010 means that it is amongst the sturdiest and most robust of full cassette awnings on the market

the 85 mm roller tube ensures the highest stiffness and the best possible cover winding characteristics even at the largest widths

front profile with integrated gutter and hidden water drainage spouts

when closed the folding arms are protected from the weather by the cassette

Optional Accessories

the shadeplus creates an additional room on the patio. Protection from the sun, the wind and inquisitive glances all in one

radio-controlled motor with radio remote control for ease of use

hard-wired motor operation (optionally with automatic weather controls) for straightforward and easy operation

in the case of manual operation ease of use is ensured with the spring-assisted gearbox

wall sealing profile to cover the gap between awning and wall

awning available in non-standard RAL colours

available with bionic tendon

available with a valance

awnings with 2 folding arms are available with the innovative silentec technology

Lounge colours

off-white textured finish 5233

stone grey metallic 5215

Havanna brown textured finish 5229

anthracite metallic 5204

Alternatively front profile end caps can be supplied in polished chrome

Colours similar to those in the RAL chart. Colours may differ slightly from those depicted in both hue and finish.

Frame colours

		standard	optional
traffic white	RAL 9016		
metallic aluminium	RAL 9006		
grey brown, similar to	RAL 8019		
light ivory	RAL 1015

dimensions in cm

= =  =  

1) a shadeplus / drop valance is not possible

2) awnings with 3 arms or a projection of 400 cm are only available with motor

3) with 3 folding arms, if fitted with a shadeplus / drop valance

4) please note the minimum widths!

Due to the compact awning construction and depending on the width and the projection, contact between cover and folding arms may occur during extension and retraction. This has no detrimental effect on the functionality and / or durability of the awning.

Operation / Drive

	standard	optional
manual operation	☒	–
servo-assisted operation	–	☒
hard-wired motor	–	☒
io radio controls	–	☒
silentec	–	☒ ⁵⁾

1) up to a maximum awning pitch of 35°

Dimensions and tolerances

	width	projection
housing tolerances	+ 5 / - 15 mm	± 40 mm
awning cover width = awning width	- 160 / - 180 ²⁾ mm	
awning cover length = awning projection		+ 150 mm

2) for awnings with shadeplus / drop valance both for the awning **and** the shadeplus cover

Additional information

The width of the awning cover is always **less** than that of the awning. Please refer cover sizes in the case of coupled units and those with more than 2 arms to us.

Awning pitch range:

from 5° to 35° or 36° to 65° (to the horizontal).

Definition of projection:

Please consult the section “Technical Information”.

In the case of manual operation approximately **16 winding handle revolutions can be assumed per metre of awning projection.**

It takes approximately **12 seconds per metre** to extend the awning in the case of **motor-driven units.**

Definition of shadeplus drop: The shadeplus drop is measured from the bottom edge of the shadeplus profile to the bottom edge of the valance profile. Due to fabric thickness tolerances the actual drop may be shorter than the nominal drop by up to 5 cm. For the maximum shadeplus drops please consult the section “Technical Information”.

A shadeplus is not available with sunsilk perla FR, sunvas perla or PVC covers.

Coupled folding-arm awnings are available up to a **max. of 3 single units** side by side, however only with a maximum of 6 folding arms and **only operated by motor.**

A coupled unit is available with **junction roller**. Pattern repeat mismatches are possible in the case of junction roller covers. A junction roller may not fit when the projection is the maximum for the width of each awning. (see also the section on “Installation”, the arm separation table).

If coupled awnings are fitted into a **recess or reveal** the overall width of the coupled awning must be at least 6 cm less than the width of the opening to allow the awning to be coupled.

A radio-controlled motor in io technology is available (see “Optional Accessories”), but io control is not available for the spotline.

HT	2				3				4				2				3				4			
BM	8				12				16				8				12				16			

The shear force is calculated on the basis of 2 fixing points per bracket, because – depending on the roof pitch – it cannot be guaranteed that 4 fixing points per bracket can be used.

- M = awning width
- H = projection
- Md = torque value for the bracket in the immediate vicinity of the arm
- HT = no. of brackets
- FS = shear force
- BM = no. of fixing points

ZB = intermediate width

markilux spotline for the markilux 5010

Light bar with fixture brackets for the cassette

With the markilux spotline the area underneath the awning is bathed evenly in a pleasant light.

The markilux spotline can be fitted or retrofitted to the cassette of the markilux 5010 using additional brackets.

The built-in spotlights can be adjusted individually – they can be rotated through 360° and tilted up to 60°.

Apart from the standard colours the cassette can – for a small surcharge – also be powder coated in other RAL colours to match the awning.

The markilux spotline is controlled via an on/off switch. It is wired to the mains by means of a connecting plug (Hirschmann).

Its construction makes it very quick to fit.

With the brackets already attached, the markilux spotline is suspended from the back joint in the cassette housing. It is then adjusted and tightened in place. The power supply cable is fixed in place using self-adhesive cable ties.

Quantity of brackets and their separation from one another

3 × 1,0 mm²

1 = neutral N (blue)
2 = live L (brown)
3 = unused
PE = earth E (green / yellow)
