A modern house at night with a large glass-enclosed outdoor living area and a swimming pool. The house features a dark exterior and a large glass facade that reveals the interior. The outdoor living area is illuminated by warm, recessed lighting in the ceiling. A dining table with chairs is visible inside. The swimming pool in the foreground reflects the lights from the house and the starry night sky.

# PRICE GUIDES

Investing in a new awning is often part of a greater investment in enjoying more of your outdoor space for living, entertaining, and simply relaxing.

Most people want to know the ‘rough’ price of a product before investigating further, especially if it is specialised or purpose made.

Most of the products on offer from Samson Awnings are specialised and almost all purpose made. Some of the products have vast price differences depending on size, specification and other factors. The installation cost can also vary depending on such conditions, as well as factors such as location.

In this guide we have we have presented are some categorised price examples for the most common models, sizes and specifications, despite them being bespoke products.

We hope this helps you in understanding the potential costs for our range of standard and bespoke outdoor living products.

Samson Awnings - Price Examples

Parasols & Umbrellas

# BASIC UMBRELLAS

Most of our umbrellas are perfectly suited to commercial or domestic environments with superior components and high quality fabric covers.

Our basic range of umbrellas includes many different shapes and sizes with wooden or aluminum support poles.

**Prices from £330** Inc VAT

(Based on 2.2m square, Supply only)

## What is included:

- Choice of 24 colours for fabric cover
- Cover bag for umbrella when closed
- Eucalyptus or aluminum pole and frame
- Base plate for ground fixing (many optional extras available)

# LUXURY UMBRELLAS

Samson offer a wide range of luxury, larger umbrellas for domestic or commercial use with super strong construction and a wide range of colours, support options and accessories such as lights, heaters and even electric operation.

**Prices from £2,200** Inc VAT

(Based on 3m x 3m square, Supply only)

## What is included:

- Ground fixing tube and accessories
- Powder-coated aluminum support pole and framework in colour choice
- Choice of fabric colours
- Protective cover for when umbrella is closed
- Stainless steel crank handle for lowering and raising umbrella

# CENTRE POLE UMBRELLAS

Centre pole supported umbrellas are constructed mainly from aluminum, and are ideal for commercial or domestic use.

Fixed or mobile bases are available for different surfaces and conditions as well as a massive range of heaters and lighting options to incorporate underneath the umbrella.

**Prices from £1,800** Inc VAT

(Based on 4m round, Supply only)

## What is included:

- Choice of colours for the framework
- Choice of fabric cover colours
- In ground support base
- Cover for protection of umbrella when closed
- Stainless steel hand crank for operation

# CANTILEVER UMBRELLAS

We offer a wide range of side supported, wall mounted, cantilever type umbrellas for domestic or commercial applications.

Different shapes, sizes and support systems are offered as well as a massive choice of fabric colours.

Printing can also be offered for commercial use if required.

**Prices from £700** Inc VAT

(Based on 3m x 3m square, Supply only)

## What is included:

- Aluminum framework
- Over 20 different fabric colours
- 360 degree rotation and tilt function
- Base frame
- PVC cover bag protection

Parasols & Umbrellas

## STORMPROOF UMBRELLAS

Samson offer umbrellas with tested wind ratings of over 100km/h which can be left open for most of the year, with their super strong and durable PVC covers and stainless steel framework structures.

Sizes are available from 2.8m up to 6m, and in different shapes these umbrellas are ideal for commercial applications with printing also available for the covers.

Lighting and heating can also be added for comfort in the cooler evenings.

**Prices from £3,900** Inc VAT

(Based on 3.5m x 3.5m square. Supply only)

### What is included:

- Stainless steel framework structure
- Waterproof, fire retardant PVC cover in over 40 colour options
- In ground base

Parasols & Umbrellas

Retractable Awnings

# BASIC AWNINGS

The term 'basic' simply signifies that the awning has no extras, and is primarily for the purpose of sun shading an area or room.

Our basic awnings are of the highest quality, with the very best components and materials. Manufactured by world-leading brands in Germany and Holland, the awnings are developed in the same climate as the UK.

If it is presumed that most retractable fabric awnings purchased for the purpose of sun shading an average sized patio or garden area is between 2.5m and 5m wide with a projection between 2m and 3m.

So, for a basic awning at around 3-5m wide and between 2m and 3m projection you would expect to pay between £1,500 and £3,000 plus VAT.

All of our awnings are made to measure on the width.

## Prices from £1,500 Inc VAT

(Based on 3m x 2m, Supply only)

### What is included:

- Made to measure width sizes in millimeters
- High quality aluminum construction
- Choice of over 200 fabrics for the main awning cover
- Wall mounting brackets
- 5 year guarantee

### Optional Extras Available.

Standard Electric Operation & switch - Add £350

Remote Control Electric Operation - Add £550

Installation - Starting From £500

Wind Sensor - Starting From - £60

# LUXURY AWNINGS

We use the word 'luxury' to describe larger sized, full cassette awnings with electric operation as standard and with many more options available.

Most of the higher-end awnings we offer can be manufactured up to around 14 metres wide, with a maximum projection of 4 metres possible.

Stronger and larger arms are used and they can be used in higher wind speeds with protection from light rain also possible.

More recently a popular width has become around 7 metres, and this is the maximum width for an awning in one complete piece before they are 'coupled' which is effectively two awnings joined together.

Many larger awnings are sold between 5m and 7m wide with a projection between 3m and 4m.

The brackets for fixing awnings this size become very important, and there are more of them, so the wall they are fixing to is also more important for the right position and anchorage.

**Price from £3,500** Inc VAT

(Based on 5m x 3m, Supply only)

## What would be included:

- Made to measure width sizes in millimeters
- High quality aluminum construction often with options on cassette finishing
- Electric operation with remote control
- Built in wind sensor
- Choice of round, oval and square cassette models for better architectural integration
- Choice of over 200 fabrics for the main awning cover
- Wall mounting brackets
- 5 year guarantee

## Options Usually Offered

Smart receiver technology - Starting from £150

Ultra silent motor drive - Add £200

Installation - Starting from £600

LED light strip integrated along length of cassette  
- Add £130

Non standard RAL colours for the cassette finish  
- Add £1400

Retractable Awnings

Retractable Awnings

## AWNINGS WITH LED LIGHTING

With developments in LED technology and advances in awning designs, the demand for LED lighting is now increased for awnings. The LED lights themselves emit excellent levels of light, making the awning usable into the evening, either as an awning or simply a light bar.

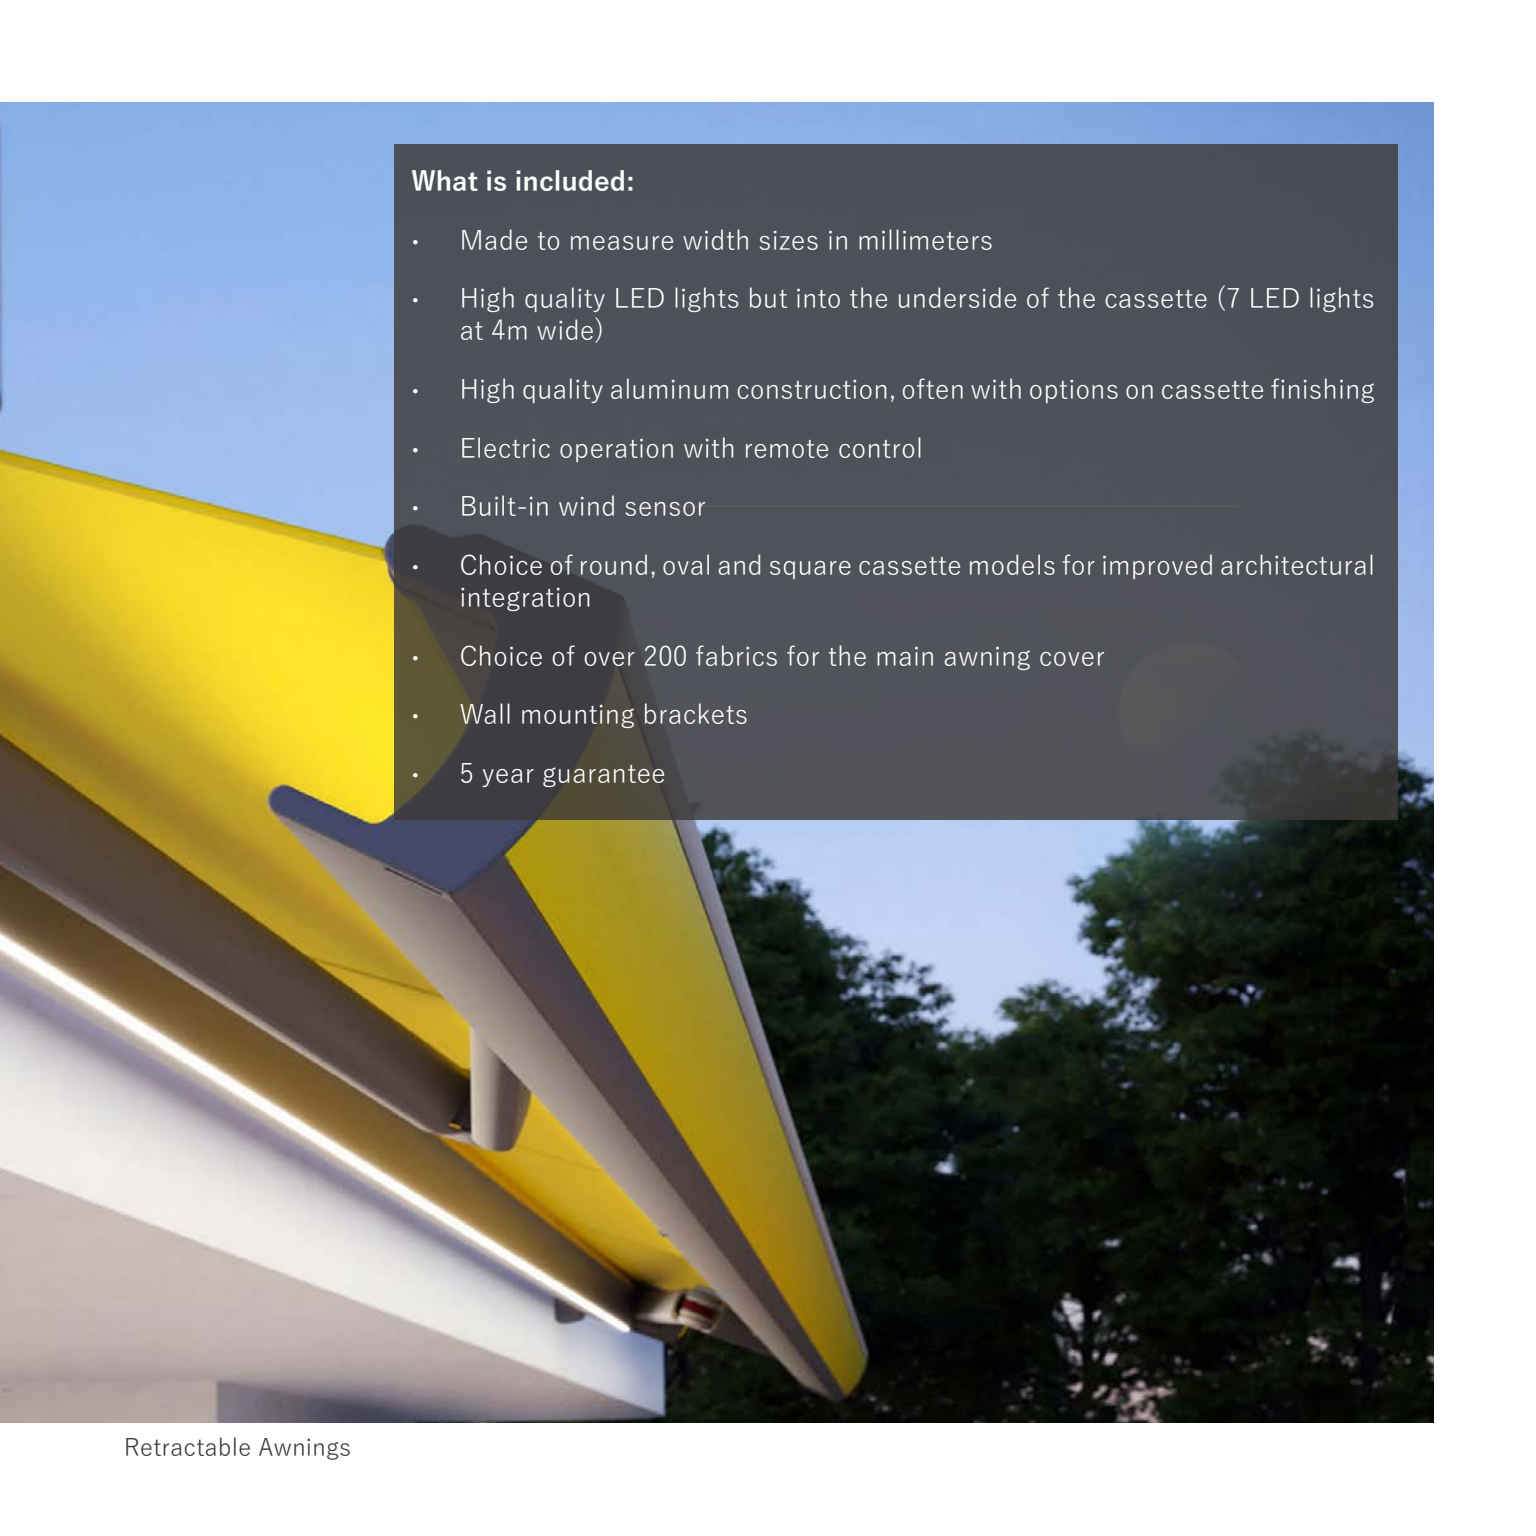

The lights are dimmable from the hand transmitter, and we offer several models with either lights in the underside of the awning cassette, underneath the awning arms or in the front profile. It is also possible at a later date to buy 'light bars' to add to an existing awning or pergola system.

A good example of the most up to date awning with LED lights would be the Weinor Semina Life, a popular size being around 4m wide with a 3m projection.

**Price from £3,500** Inc VAT

(Based on 4m x 3m, Supply only)

### What is included:

- Made to measure width sizes in millimeters
- High quality LED lights put into the underside of the cassette (7 LED lights at 4m wide)
- High quality aluminum construction, often with options on cassette finishing
- Electric operation with remote control
- Built-in wind sensor
- Choice of round, oval and square cassette models for improved architectural integration
- Choice of over 200 fabrics for the main awning cover
- Wall mounting brackets
- 5 year guarantee

# AWNINGS WITH ELECTRIC VALANCE

A very popular awning accessory for anyone with a South West or West facing garden is an electric operated drop down valance.

Not only does this provide adjustable shading for low lying sun it also offers privacy and some protection from cool breezes in the evenings. The drop down valance is available in three lengths 1m, 1.5m and 2.1m going right to the floor.

Incorporated into the front profile this sleek system also works with the wind sensor system to ensure it retracts fully if the wind becomes too strong.

**Prices from £4,000** Inc VAT

(Based on 4m x 3m, Supply only)

## What is included:

- Made to measure width sizes in millimeters
- Drop-down electric front valance with remote control operation
- High quality aluminum construction often with options on cassette finishing
- Electric operation with remote control
- Built-in wind sensor to retract valance and awning when necessary
- Choice of oval and square cassette models for improved architectural integration
- Choice of over 200 fabrics for the main awning cover
- Wall mounting brackets
- 5 year guarantee

Retractable Awnings

# AWNINGS WITH ELECTRIC VALANCE

Sometimes an awning will require a projection which is greater than the width possible for effective shading, or it is in a tight space.

We offer awnings that achieve this by the arms crossing over each other when closed.

Several options are available in manual or electric operation.

**Prices from £2,700** Inc VAT

(Based on 3m x 4m, Supply only)

## What is included:

- Made to measure width sizes in millimeters
- High quality aluminum construction often with options on cassette finishing
- Manual operation with servo assisted operation
- Choice of over 200 fabrics for the main awning cover
- Wall mounting brackets
- 5 year guarantee

Retractable Awnings

## EXTRA LARGE AWNINGS

Samson can offer awnings up to 14m wide to cover large terraces, patios or green areas.

Once over 7m wide awnings will be 'coupled', effectively meaning they are two awnings combined as one unit with a connection in between.

The maximum projection for unsupported fabric awnings is still 4 metres at any width.

**Prices from £9,000** Inc VAT

(Based on 9m x 4m, Supply only)

**What is included:**

- Made to measure width sizes in millimeters
- High quality aluminum construction often with options on cassette finishing
- Electric operation with remote control
- Built-in wind sensor
- Choice of round, oval and square cassette models for improved architectural integration
- Choice of over 200 fabrics for the main awning cover
- Wall mounting brackets
- 5 year guarantee

# BASIC GLASS VERANDAS

A Samson basic glass veranda, used simply as an all year round cover with some options available, consists of in 6mm glass set into an aluminum framework, finished in a choice of standard colours.

The design is a lean to system to project away from a solid wall or structure, and provides extra outdoor covered space quickly and easily.

Integrated rainwater guttering and a choice of support leg positions make our range of verandas a great choice for all year-round rain protection with options such as glazed side infills, vertical blinds and a retractable fabric blind for the roof itself to protect against the sun in the summer months.

**Prices from £2,200** Inc VAT

(Based on a 4m wide and 3m projection, Supply only)

## What is Included:

Made to measure in width and projection

Adjustable pitch when installing

Fully finished colours from a standard range

Wall brackets and appropriate ground fixings for posts

Toughened 6mm clear glass sections

10 year guarantee

# STANDARD GLASS VERANDAS

Our standard range includes a self-supporting model to enable a glass veranda to be installed in front of a building which may not have suitable fixing positions or the height necessary.

A goal post framework creates the higher end of the veranda and is fixed into the ground or is surface-mounted depending on the ground itself. 8mm glass is used in the standard range with projections up to 6m possible at any width as required.

Integrated rainwater guttering tails the rainwater off the roof and disperses down through the support posts wherever is required on site.

Front and side infills are available to protect from wind and rain and are modular so can be added later on if required.

**Prices from £3,500** Inc VAT

(Based on a 4m wide and 3m projection, Supply only)

## What is included:

Made to measure in width and projection

Adjustable pitch when installing

Fully finished colours from a standard range

Wall brackets and appropriate ground fixings for posts

Toughened 8mm clear glass sections

10 year guarantee

# LUXURY GLASS VERANDAS

The Samson range of luxury glass verandas offer's the very highest quality aluminum structures capable of including a wide range of accessories and side and front vertical infills to ultimately create an outdoor room if required. As the system is modular, this can be achieved in stages to assess the environment as you go along and decide accordingly.

Almost any colour is available for the framework structure. For the vertical side and front, you can add sliding glass doors, fixed aluminum paneling, hinged doors, vertical fabric blinds, solid glass section and side operating blinds, all making a versatile outdoor living area which can be enjoyed all year round. A retractable fabric roof blind is probably the best optional accessory to provide a shade solution for the hotter months whilst still having your rain protection all year round.

**Prices from £6,200** Inc VAT  
(Based on a 5m wide and 3m projection, Supply only)

**What is included:**

- Made to measure in width and projection (up to 6m projection)
- Adjustable pitch when installing
- Fully finished colours from a standard and bespoke range
- Laminated 10.8mm clear glass sections
- Wall brackets and appropriate ground fixings for posts
- Integrated front gutter for rainwater collection and dispersal
- 10 Year guarantee

Retractable Roof Systems

# RETRACTABLE ROOF SYSTEMS

Our range of retractable fabric pergolas are wall-mounted, front leg-supported systems with the fabric cover pulled taught by a pulley and tension system in the side tracks.

The systems are capable of use in higher winds and rain than a normal self supporting awning, and can also have greater projections as there are no hinged arms used in the mechanism.

Made to measure and with a choice of over 200 fabrics and 57 frame colours, this is a great system for sun and rain protection for larger patio areas or where there is little fixing available on a single story building.

**Price from £3,700** Inc VAT  
(Based on a 4m x 3m system, Supply only)

## **What is included:**

Choice of over 200 fabrics

Choice of over 60 frame colours

Made to measure sizing in width and projection

Remote control electric operation for effortless control

All wall brackets and ground fixing plates

5 year guarantee on motor drive

# LUXURY RETRACTABLE FABRIC ROOF

The larger retractable roof systems we offer can provide cover for very large areas indeed, domestic or commercial. Made to measure with projections up to 6.5m, luxury awnings are available in any width as the units can be coupled together as required.

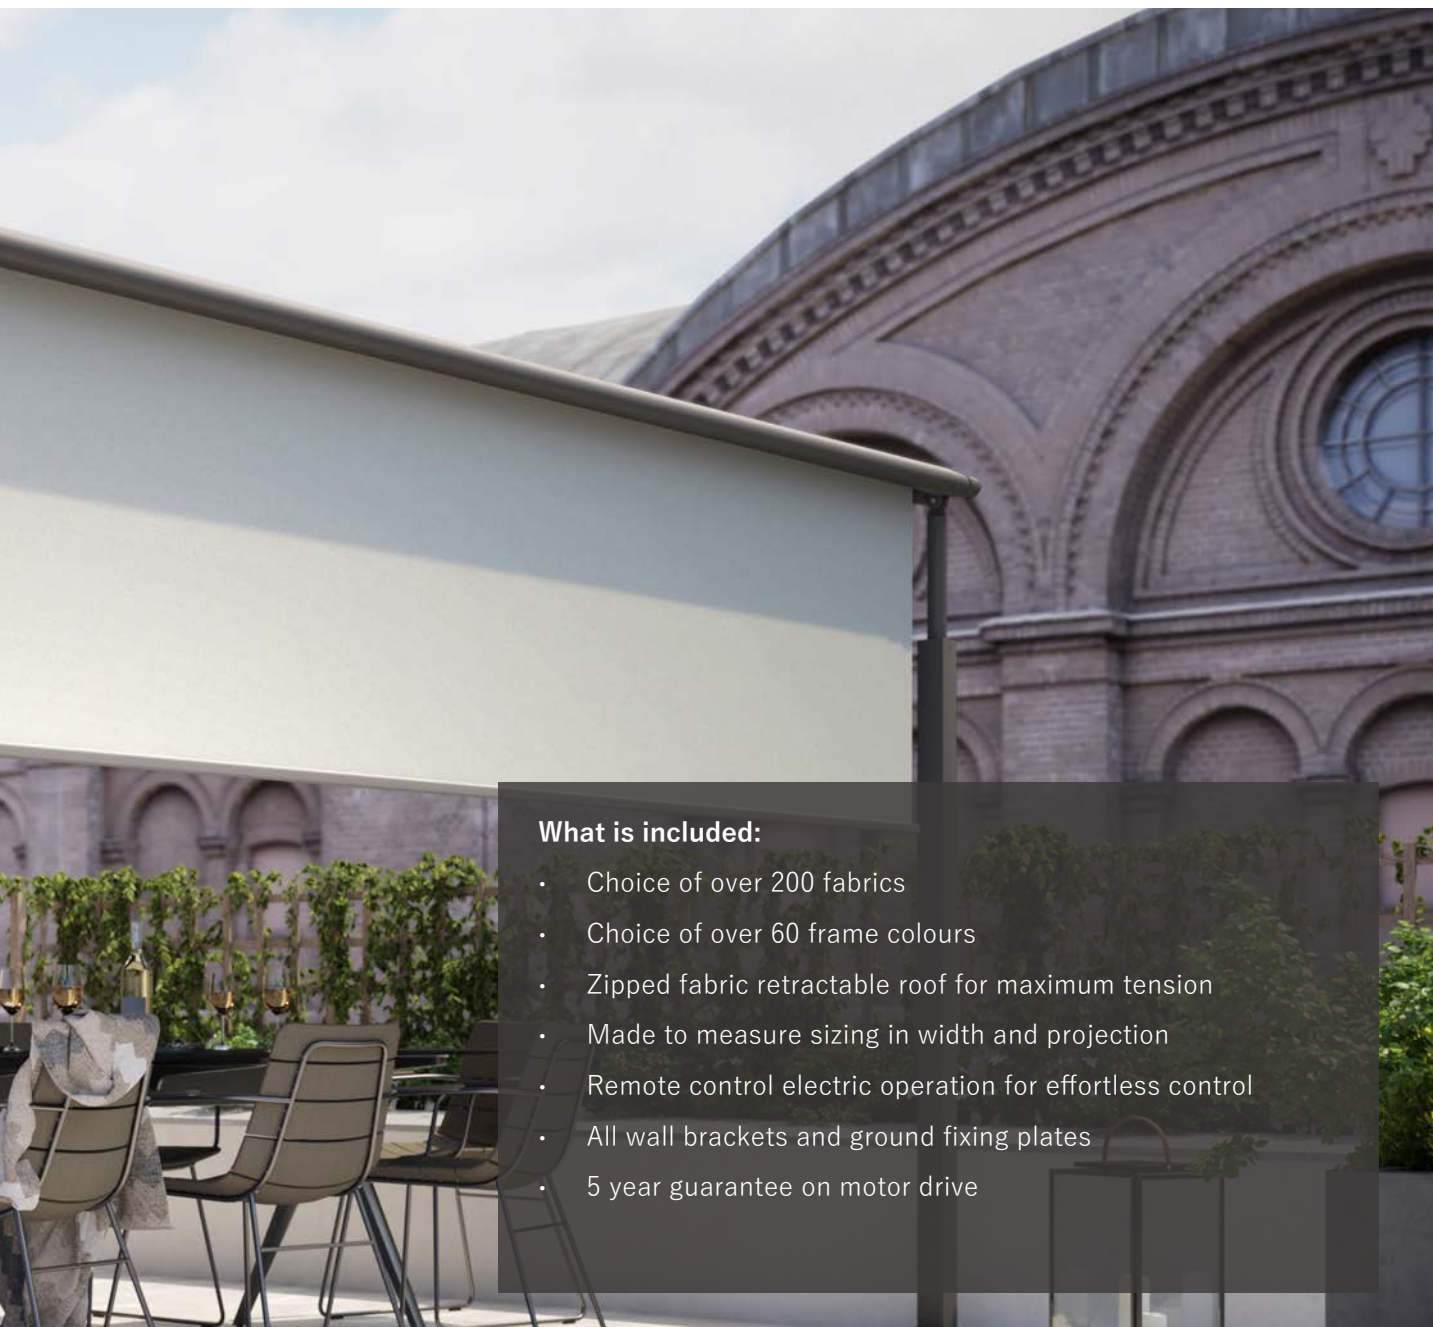

The fabric cover is zipped into the side channels for maximum cover tension and maximum rain water dispersal down to the front profile. We offer systems with a front profile and built-in rainwater guttering.

The heavier duty framework systems are modular and able to have side and front vertical protection systems added at any time, including vertical blinds, sliding glass doors or just solid glass or aluminum panels.

The pergola system can be totally enclosed, if required, for maximum weather protection at the touch of a button or the simple sliding of doors.

**Prices from £4,600** Inc VAT

(Based on a 4m x 4m system, Supply only)

#### **What is included:**

- Choice of over 200 fabrics
- Choice of over 60 frame colours
- Zipped fabric retractable roof for maximum tension
- Made to measure sizing in width and projection
- Remote control electric operation for effortless control
- All wall brackets and ground fixing plates
- 5 year guarantee on motor drive

# MODULAR RETRACTABLE ROOF SYSTEMS

Our range of modular systems allow the addition of vertical side elements at any stage after the initial roof is installed to further enhance weather protection.

The aluminum framework for the system is capable of having many different products added to the front and sides for wind and rain protection to one or all exposed apertures. The retractable roof is a tough layered fabric and can withstand heavy rain and strong winds.

Rather than rolling into a cassette, the roof will concertina at the rear of the unit to sit under a protective roof section. The framework incorporates a horizontal cross beam at the front which has built-in rainwater guttering to trail the rainwater away and out down the support legs.

To the sides you can add sliding glass doors, folding doors, hinged doors, vertical blinds and solid sections on aluminum or glass, all designed to protect and make the environment as pleasant as possible for outdoor living and entertaining most of the year round.

**Prices from £7,500** Inc VAT  
(Based on a 4m x 4m system, Supply only)

## What is included:

- Choice of fabric colours for the roof  
(one colour one side and a different on the other)
- Choice of over 60 frame colours and optional any colour
- Super tough electric retractable fabric roof
- Made to measure sizes
- Remote control operation
- All necessary brackets for installation and further bracketry for additional optional accessories
- 5 year guarantee on motor drive

Retractable Roof Systems

Retractable Roof Systems

# STAND-ALONE RETRACTABLE ROOF SYSTEMS

Samson offer a range of totally stand-alone structures with an integrated retractable fabric roof. We offer open sided or closed systems with integrated rainwater collection.

A stand alone system is often used adjacent to single story structures where there is insufficient height or fixings, or where a horizontal flat profile is required rather than a sloping roof design.

The fabric roof system used will always either have an arc shape in the roof or a slope when hidden behind the facade of certain models.

The basic system uses an arched shape fabric roof with a concertina stacking when open, with the rainwater dispersed either on one side or both sides depending on the roof design chosen and the application.

Like other fabric retractable roof systems, the fabric used is very tough and totally waterproof with high levels of resistance to UV rays.

**Prices from £5,800** Inc VAT  
(Based on a 4m x 3m system, Supply only)

## What is included:

- Aluminum framework structure
- Choice of finished powder coat colours
- Choice of fabric colours for the roof fabric
- Made to measure sizes
- Remote control electric operation
- Floor fixing brackets

# OUTDOOR GLASS ROOMS

Samson offer a wide range of glass outdoor rooms, defined by an aluminum structure with maximum glazing to the roof, sides and front providing an outdoor, all year-round protected room for relaxing, entertaining and generally enjoying your garden and outdoor area.

The maximum light and vision takes you as close to the weather as possible but without actually having the wind and rain to spoil your environment.

When required the front and sides can all be opened up for maximum air movement and cooling in the hotter months of the year.

The structures are generally attached to an existing wall or building structure and are made to measure in all ways: width, projection, height and roof pitch.

The principle is one of a glass roof with rainwater collection in an integrated front gutter profile. There is further protection to the sides and front vertical sections from fixed, sliding or folding glass doors which themselves are frameless for maximum vision and light.

Outdoor Rooms

The framework of the structure is all aluminum with various finishes and many accessories available including vertical or horizontal fabric blinds for sun shading, LED lights for night time, halogen heaters for the cooler months and other methods of side protection, including solid or louvered walling.

**£19,000** Inc VAT

(Based on a 4m x 3m room with sliding glass doors all round, Supply only)

## **What is included:**

- Aluminum framework structure in choice of over 60 finished colours
- 10.8mm clear glass in the roof sections
- Trapezium glass infills to form the necessary support for the sides
- Sliding frameless glass doors to both side and the front with clear 10mm glass
- Built in rainwater guttering to the front profile with drainage through one of the support posts
- 10 year guarantee  
(except glass roof sections)

Outdoor Rooms

Outdoor Rooms

# RETRACTABLE OUTDOOR ROOMS

We offer various outdoor rooms with varying methods of retractable fabric roof mechanics.

The structure can be self supporting or attached to the wall of a building, made to measure in every dimension for the perfect fit.

The fabric is extended and retracted and either shaped into an arc or is set at an angle inside the aluminum framework structure and facade to ensure proper rainwater dispersal.

The fabric is further supported by a number of aluminum struts going across the width to provide strength and support for heavy rain and light snow.

These same horizontal struts can have LED lights integrated, or the light can be fitted in the perimeter of the system.

**£15,400** Inc VAT

(Based on 4m x 3m with sliding glass doors on three sides, Supply only)

## **What is included:**

- Complete aluminum framework structure in a choice of finished standard colours
- Retractable electric operated fabric roof with remote control
- Sliding glass doors to three sides with 10mm clear toughened glass
- Rainwater guttering built into the perimeter and dispersal down the supporting posts

# BIOCLIMATIC OUTDOOR ROOM

The bioclimatic outdoor room is a flat roof principal with a slight pitch in the louver blades used to provide water drainage into the integrated guttering, which is on all four sides of the structure (three on a lean to system).

The louver roof system offers all year round protection, and at the push of a button allows air movement and sunlight in, but with control on the amount by the aluminum blades which rotate up to a full 135 degrees from their closed position.

With the sides closed in using any of the options available, you have an outdoor room providing all year round protection from sun, wind and rain. Vertical blinds and sliding glass doors are popular but other infills are also possible.

LED lights integrated into the roof or the perimeter provide use into the night and various forms of heaters provide warmth on the cooler months.

The louvered outdoor room can be attached to an existing building or have its own stand alone support because of its design, making it perfect where the building cannot be fixed to or the system needs to be away from any supporting structure.

**Prices From £22,000** Inc VAT

(Based on 4m x 3m lean to with vertical blinds on 3 sides, Supply only)

**What is included:**

- Choice of over 200 fabrics
- Choice of over 60 frame colours
- Zipped fabric retractable roof for maximum tension
- Made to measure sizing in width and projection
- Remote control electric operation for effortless control
- All wall brackets and ground fixing plates
- 5 year guarantee on motor drive
