QUBE CENTER

THE PERGOLA THAT GIVES YOU ALL-ROUND
PROTECTION

QUBE CENTER

YOUR PERSONAL ALL-ROUND PROTECTION

With its Qube series, ERHARDT Markisen has extended its range of pergolas. The QUBE Center is a modular pergola for complete sun protection. It looks extremely elegant due to its slim profiles, and is flexible and expandable in a modular manner. It combines design and functionality with maximum comfort, and thus protects your terrace. This lets you extend your outdoor season. It is an “ingenious” solution for protecting yourself from the sun, rain, wind and heat. The modern design of the QUBE Center allows it to fit perfectly into your environment.

QUBE CENTER

ONE PRODUCT MANY OPTIONS

Complete protection combined with appealing design

The QUBE Center is characterised by its modularity with maximum protection of the terrace. In combination with the waterproof fabric and vertical zip awnings and/or all-glass sliding doors, the aluminium construction creates ideal protection for your terrace without being obtrusive.

Provision of maximum shade

The QUBE Center can protect large terraces up to a width of 13 m and a depth of 6.5 m.

Patented sealing system

Patented rain protection piping is attached to the side guide rails. This profile cannot move when the fabric is moving and is attached to the fabric with two sealing lips. This ensures the required impermeability and prevents water from penetrating, even in the event of wind.

Ambience with dimmable LED strips

Dimmable LED strips (only dimmable with io) in the fabric support profile are available as an option and ensure your personal ambience by allowing you to conveniently use them via a remote control.

Optimum protection for the fabric

In its retracted state, the fabric is protected against dirt from above thanks to its rain cover.

Intelligent, concealed drainage

The waterproof fabric channels the rainwater into the front gutter. From there, the water is drained in a concealed manner by the supports. No external downpipe constructions disrupt the harmonious look.

Adjustable support feet

The slightest unevenness of the terrace is incorporated within the construction. The concealed and adjustable support feet enable the pergola to be mounted quickly and perfectly.

Resistant to high wind loads

The construction is designed for higher loads (up to class 7 according to the Beaufort scale) in order to achieve comprehensive protection even in exposed locations.

QUBE CENTER

AT A GLANCE

All features of QUBE Center

Maximum dimensions	1300 x 650 cm (max. width 1300 cm fabric in one piece)
Means of installation	Wall mounting
Areas of application	Pergola awning
