## QUBE LINE

DISCREET, ROBUST AND EXTREMELY  
ELEGANT

## QUBE LINE

### THE DISCREET LIGHTWEIGHT PERGOLA

With its QUBE series, ERHARDT Markisen has extended its range of pergolas. The QUBE Line is a folding pergola and protects you from the sun, wind and rain on your terrace. It is discreet, lightweight and extremely elegant. The QUBE Line pergola is an innovative product with a precise and reliable fabric guidance system, which combines the lightness of the shapes with the good protective properties of the fabric. The fabric guidance system runs within the guide rails and the mechanism disappears into the particularly slender structure. Extend your outdoor season with additional optional accessories. At night, LED lighting ensures an atmospheric ambience on your terrace. The QUBE line with its elegant design integrates perfectly into your surroundings.

# QUBE LINE

## ONE PRODUCT MANY OPTIONS

### Sleek profiles, linear design

The QUBE Line is characterised by its sleek profiles and clear linear system. The light-weight aluminium construction, in combination with the waterproof fabric, creates ideal protection for your terrace without being obtrusive.

### Provision of maximum shade

The QUBE Line can protect large terraces up to a width of 13 m and a maximum depth of 5.50 m.

### Patented sealing system

Patented rain protection piping is attached to the side guide rails. This profile cannot move when the fabric is moving and is attached to the fabric with two sealing lips. This ensures the required impermeability and prevents water from penetrating, even in the event of wind.

### Ambience with dimmable LED

Your personal ambience may be ensured by means of integrable LED spots in the drop profile, which you can dim continuously via a remote control.

### Optimum protection for the fabric

In its retracted state, the fabric is protected against dirt from above thanks to its rain cover.

### Intelligent, concealed drainage

The waterproof fabric channels the rainwater into the front gutter. From there, the water is drained in a concealed manner by the supports. No external downpipe constructions disrupt the harmonious look.

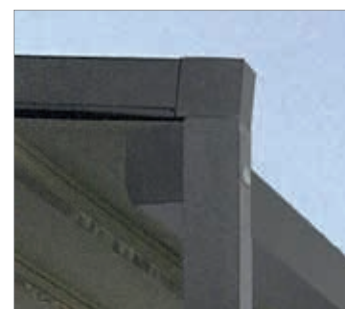

### Adjustable support feet

The slightest unevenness of the terrace is incorporated within the construction. The concealed and adjustable support feet enable the pergola to be mounted quickly and perfectly.

### Many options for your terrace

The QUBE line offers a wide range of accessories to enable you to design your terrace individually. An accompanying gutter rectifies the overall view and makes it even more sleek. Heating and light complete the whole package.
