# Showing a tendency towards perfection. Moving. Differently.

## markilux 930

This awning moves differently from the rest, because as you retract the markilux 930, the awning pivots into a horizontal position and merges into the ceiling. When extended, the angle of pitch can be set at up to 80 degrees – so if required, the awning can pivot almost to the vertical. The versatile markilux 930 is perfect for all balconies and eaves that require no additional protection of the awning cover or technology. Your new shading device bows to the sun – allowing you to enjoy being outside in the evening even when the sun is low in the sky.

### Pivoting mechanism

The just 122 mm high awning frame disappears discreetly under the soffit when retracted. Only during the extension process does the markilux 930 pivot into the desired angle.
