## ERHARDT PM

### MODERN DESIGN WITH MANY OPTIONS

ERHARDT PM pergola awnings can be used for small or very large areas (e.g. small balconies, roof terraces, other terraces or for restaurant use). Pergola awnings are the ideal choice for exposed locations subject to strong winds and also offer comprehensive protection.

The ERHARDT PM can be equipped with vertical or side awnings for additional privacy and sun protection (for when the sun is low). The ERHARDT Zip with its concealed zipper system is our special recommendation for this purpose. This vertical awning can be integrated perfectly at any time and also offers an increased level of wind protection. Design your favourite place with a fabric from our exclusive fabric collections Tibelly Ambiente (polyester) or Tibelly Classic (acrylic).

# ERHARDT PM

## ONE PRODUCT – MANY OPTIONS

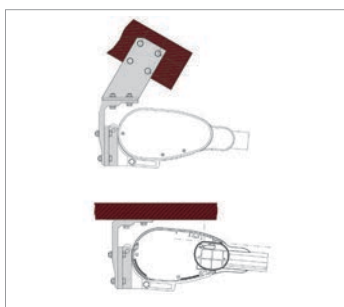

### Design

The ERHARDT PM is a pergola awning with a high-quality aluminium cassette offering all-round protection for the fabric and mechanism. The cassette has two guide rails for the fabric as well as fixed supports at the end of the projection length. This makes it especially durable and extremely wind-resistant.

### Rain protection

With its supports, the ERHARDT PM offers perfect sun protection, even in windy conditions (also suitable for balconies and roof terraces). It also provides optimal rain protection when combined with an appropriate fabric and a pitch adjustment as of 15°.

### High level of flexibility when mounting

Various bracket versions make mounting possible even on challenging facades. In addition to the standard wall bracket, additional brackets are available for mounting on rafters or ceilings.

### Additional privacy and sun protection

The ERHARDT PM can be equipped with vertical or side awnings for additional privacy and sun protection (for when the sun is low). This vertical awning can be integrated perfectly at any time and also offers an increased level of wind protection. The fabric made of fibreglass screen allows you to see your surroundings while shielding you from curious glances.

### Multi-part units

The ERHARDT PM can be coupled. This means that even larger areas can be shaded with multiple units. The fabric gap is closed by a specially developed aluminium cover. Series mounting allows any number of units to be combined.

### **The perfect atmosphere with a lighting rail and heater**

The optional lighting rail can be installed either on the cassette or on the wall and allows you to illuminate your terrace with professional perfection. The optional infrared heaters provide pleasant heat. The heat is noticeable within a very short time. Thus you can enjoy longer evenings in a cosy atmosphere. The heat is clearly noticeable within a very short time (within seconds).

### **CE Made in Germany**

All ERHARDT Markisenbau products are made in Burtenbach, Bavaria. All-round service and continuous production control guarantee high quality.
