# Opal Design II

## Opal Design II LED | Valance Plus | LED Valance Plus

The **Opal Design II** cassette awning stands out for its timeless, classic design hand in hand with groundbreaking weinor technology. Made to shade large areas, it blends in harmoniously with its surrounding architecture, the attractive shape of the cassette adding a sophisticated element. A wide range of tempting and practical optional extras make it easy to operate and wonderfully convenient while also extending its lifetime.

# Opal Design II Highlights

01

**Awning cassette:**  
Classic design with the  
latest technology

## Versions:

Valance Plus

Multi-section units

**weinor LongLife arm:**  
Very durable and  
low-noise

# Opal Design II Benefits

## Cassette awning – classic design with the latest technology

Classic, timeless design plus superior high-tech elements are united in the top-class weinor Opal Design II awning.

- Cassette is just 16 cm high: particularly flat, attractive shape
- Smart cassette design for the utmost stability and safety

## End cap closure – unique and safe closing mechanism

If you can see that the crescent-shaped caps at the sides of the drop profile are closed then the awning is reliably protected against damp and dirt.

- Unique, patented weinor technology
- The only awning on the market with this USP

## LEDs and Valance Plus – integrated lighting and vertical protection

The Opal Design II LED variant adds integrated "warm light" LED lighting to the awning

- Individual LED spotlights integrated into awning cassette
- Infinitely dimmable when used with BiConnect radio control

The Opal Design II Valance Plus option provides vertical protection against the sun and prying eyes.

- Attractive fabric combinations
- Patented weinor OptiFlow-System® to keep fabric ideally positioned and to close the drop profile safely

## Opal Design II Benefits

### Multi-section units – to shade especially large areas

The Opal Design II also comes as a combined multi-section unit for very large terraces.

- As a 2-part unit up to 1,200 cm
- Jockey cover: easy to fit
- Coupled version not possible with Valance Plus

### Wind lock safety device – reliable protection

The ultramodern technology prevents the awning from lifting up when wind gusts from below.

- Patented wind lock safety device
- Via a tilting member, the drop profile and awning arm are tilted when ascending
- Proven, maintenance-free technology
- All components made of forged and extruded aluminium

### weinor LongLife Arm – durable, quiet operation

The weinor LongLife arm features an exceptionally robust high-tech belt.

- Tested to more than 100,000 cycles
- Extremely quiet operation
- No maintenance required
- Drop forged aluminium in joint – light but highly robust

01

## LED lighting – 30,000 hours of lighting require minimal energy consumption

Select LED components for top weinor quality:

- Integrated into the cassette
- Atmospheric light thanks to special glass lenses
- Lighting remains on even when awning is retracted
- Highly energy-efficient
- Operating life of 30,000 hours
- Infinitely dimmable when used with BiConnect radio control
- Easy to service: simply replace individual LED lights without uninstalling the awning

**The receiver, power supply pack and other electrical components, such as the BiConnect receiver are integrated into the cassette**

The transformer box can be easily be opened for servicing purposes. The receiver, which is separate from the drive, is then easily accessible.

### Integrated LED lighting

Some options are subject to a surcharge. For prices, please refer to the weinor awnings price list.

# Opal Design II Planning

## Site measurements – Determining the projection and head clearance height

- Find the projection by looking in the "Projection" table for the terrace depth.
- Using the projection from the table and the required angle of inclination, consult the "head clearance height" table for the head clearance height. This head clearance height refers to an installation height of 300 cm.
- Add/subtract the difference between 300 cm and the actual installation height to/from the head clearance height in the table.

### Determining the projection

Angle of pitch	Terrace depth in cm					
	150	200	250	300	350	400
5°	150	200	250	300	350	400
15°	160	210	260	310	360	400
25°	170	220	280	330	390	400

Projection in cm (rounded figures)

This table can be used to find the awning projection for any given horizontal patio depth.

### Determining the head clearance height

Angle of pitch	Projection in cm					
	150	200	250	300	350	400
5°	275	270	270	260	260	250
15°	250	240	220	210	200	190
25°	220	200	180	160	140	120

Head clearance height in cm (rounded figures)

This table is used to find the head clearance heights for various projections when the angle of pitch is 5°, 15° or 25°.

This table is based on the example of an installation height of 300 cm (upper edge of awning).

# Opal Design II Installation

## Installation on walls, ceilings and rafters is possible

The Opal Design II can be mounted in a wide range of ways: not only on a wall but also on a ceiling or a rafter. The brackets and mounting plates are made of extruded, powder-coated aluminium.

### Wall mounting – brackets

150 mm wall bracket

300 mm wall bracket

Side view of Opal Design II with wall bracket

## Opal Design II Installation

## Wall mounting – mounting plates

01

Mounting plate 660 x 220 x 15 mm

Position of the mounting plates using the Opal Design II 500 x 300 cm\* as an example.

\* Depending on the width of the awning, the positioning of the mounting plates may vary.

Mounting plate 660 x 390 x 15 mm

Position of the mounting plates using the Opal Design II 500 x 300 cm\* as an example.

Ceiling front plate 390 x 160 x 15 mm

**Note for front ceiling mounting:**

The indicated extraction forces apply to a storey ceiling with a thickness of at least 160 mm. Here, the fixings are installed exactly in the centre of the storey ceiling, so that there is a minimum upward and downward edge distance of 80 mm. For this mounting type, a lining, e.g. with 150 x 50 mm rectangular pipes, is required. Here, the lower edge of the rectangular pipe must be flush with the lower edge of the storey ceiling.

Update

### Extraction forces

The extraction force is the force with which the awning weight and the wind load pull on each upper and/or front fixing. The tables indicate this force in N per upper fixing. It varies depending on the awning size and the wall bracket / mounting plate used.

#### Selecting the wall bracket and anchoring system:

1. Consult relevant table for extraction force per fixing for selected awning size.
2. Select a wall bracket / mounting plate for which there is fixing material which can resist the indicated extraction force. Remember to take into account the spacing, the area which will be damaged if the fixing breaks out, the type of fixing material used and the mounting base.

Use the separate bracket overview for an exact planning of the awning attachment.

#### Extraction force in N per upper fixing for ceiling mounting

Brackets **without** mounting plates

**Wall mounting** with up to 200 mm facing (non-pressure-resistant surface)

Please observe the width to projection dimension limits

For the extraction forces of the valance plus version, please refer to the console overview!

1 x wall bracket 150 mm  
Number of fixings: 6

1 x wall bracket 300 mm  
Number of fixings: 12

**Please note:**  
from a width of 501 cm additional  
1 x wall bracket 150 mm  
as centre bracket is required.  
This means an additional 3 fixings will be  
required.

Please observe the width to projection dimension limits

For the extraction forces of the valance plus version, please refer to the console overview!

1 x mounting plate  
660 x 220 x 15 mm incl.  
1 x wall bracket 150 mm  
Number of fixings: 12

1 x mounting plate  
660 x 390 x 15 mm incl.  
1 x wall bracket 150 mm  
Number of fixings: 12

1 x roof front plate  
390 x 160 x 15 mm incl.  
1 x wall bracket 150 mm  
Number of fixings: 8

#### Please note:

from a width of 501 cm additional

1 x wall bracket 150 mm incl.

1 x shim plate 15 mm

as centre bracket is required.

This means an additional 3 fixings will be required.

When mounting with roof front plate:

1 x roof front plate 390 x 160 x 15 mm incl.

1 x wall bracket 150 mm

as centre bracket is required.

This means an additional 4 fixings will be required.

Mounting plate using the example 660 x 220 x 15 mm

## Opal Design II Installation

Update

### Extraction forces / Shear forces

#### Extraction force in N per front fixing for ceiling mounting

Please observe the width to projection dimension limits

For the extraction forces of the valance plus version, please refer to the console overview!

1 x ceiling bracket 150 mm  
Number of fixings: 6

**Please note:**

**from a width of 501 cm** additional  
1 x ceiling bracket 150 mm  
as centre bracket is required.  
This means an additional 3 fixings will be  
required.

F = force

#### Shear forces in N per fixing for rafter mounting

Please observe the width to projection dimension limits

For the extraction forces of the valance plus version, please refer to the console overview!

1 x rafter bracket incl.  
1 x wall bracket 150 mm,  
one left, one right for each

1 x rafter bracket with  
1 x mounting plate for rafter  
incl.  
1 x wall bracket 150 mm,  
one left, one right for each

**Please note:**

**from a width of 501 cm** additional  
1 x rafter bracket incl.  
1 x wall bracket 150 mm,  
one left, one right for each,  
as centre bracket is required.
