

ERHARDT PM^{light}

ERHARDT PM^{light}

RELIABLE PROTECTION WITH THE SMALL
COMPACT PERGOLA AWNING

ERHARDT PM^{light}

SIMPLE DESIGN AND RELIABILITY PROTECTION

The PM^{light} is impressive with its completely new design and Zip technology fabric guidance, eliminating the gap between the fabric and guide rail. When the awning is extended, the front rail joins neatly with the side rails, providing extensive shade with its slender posts and elegant lines. The pergola awning offers high stability and wind safety with the mounting points on the facade, together with ground mounted supports. So you can relax in your favourite place in a pleasant, shaded atmosphere.

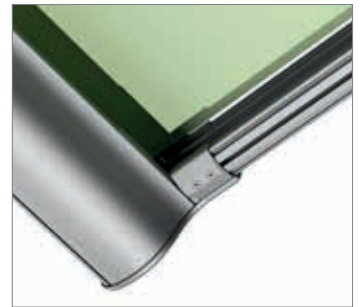

Design

The ERHARDT PM^{light} has been manufactured in a brand new modern design. Clear contours convey a harmonious and visually pleasing overall look. The pergola awning fits in harmoniously on your terrace providing optimal weather protection*.

Zip

As standard, the new guide rail is designed with the lateral zip function on the fabric, meaning that there is no longer a light gap between the fabric and lateral guide rail. The design of the rail is flexible, so that the conventional option with a gap between fabric and guide rail can be supplied.

Easy mounting

Various bracket versions enable mounting even on challenging facades, and a variety of different brackets are available for this purpose. The connection between the support and guide rail looks elegant and modern due to the use of a functional clip bracket.

Vertical sun protection

You can achieve additional privacy and sun protection at any time using suitable ERHARDT vertical awning or side screen.

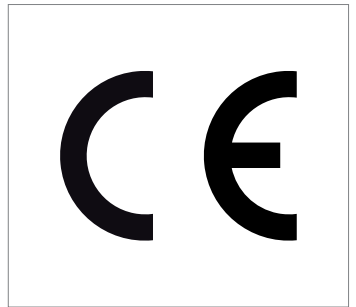

Warmth, lighting and comfort

For added convenience, the ERHARDT PM^{light} offers numerous accessories such as heating elements and a lighting rail with LED strips. The integrated remotely operated motor with wireless handset makes operation as easy as possible. A separate wind and sun automation system is optionally available.

* Minimum inclination for rain protection 15°

**Almost invisible screws in the end cover area**

The end covers are secured with special, concealed brackets and almost invisible inner hexagonal screws, meaning that there are no large screw heads to disturb the elegant overall design.

**Made in Germany**

All ERHARDT awnings are made in Burtenbach, Bavaria. All-round service and continuous production control guarantee high quality.

ERHARDT PM^{light}

AT A GLANCE

All features of the ERHARDT PM^{light}

Minimum width	100 x max. projection length 300 cm
